Consumer Price Index

A release from the Province of British Columbia's central statistical agency

REFERENCE DATE: AUGUST 2014

CONSUMER PRICE INDEX (2002=100)

HIGHLIGHTS

British Columbia's consumer price index (CPI) climbed 1.4% (*unadjusted*) in August, relative to the same month in 2013. The increase matches the inflation rate posted in July, and marks the sixth consecutive month of year-over-year inflation for the province.

Consumers spent 1.7% more for food, due to increased prices for groceries purchased from stores (+1.6%) and meals purchased from restaurants (+2.0%). Higher grocery prices were driven by a substantial rise in the cost of meat (+7.6%) and fish, seafood & other marine products (+5.3%), as well as more moderate price increases for vegetables & vegetable products (+2.5%) and fruit, fruit preparations & nuts (+1.3%).

Shelter costs (+1.0%) continued to increase in August, due largely to a notable rise in the price of water, fuel & electricity (+7.5%). Renters saw prices increase (+1.0%), whereas the cost of owned accommodations edged down (-0.4%).

Compared to August 2013, consumers paid more for recreation, education & reading materials (+1.4%) and health & personal care products and services (+0.4%), while prices for clothing & footwear (-1.5%) fell.

Prices in Vancouver (+1.4%) increased year-over-year for the sixth consecutive month, while Victoria (+1.3%) saw prices rise for the fifth month in a row.

***

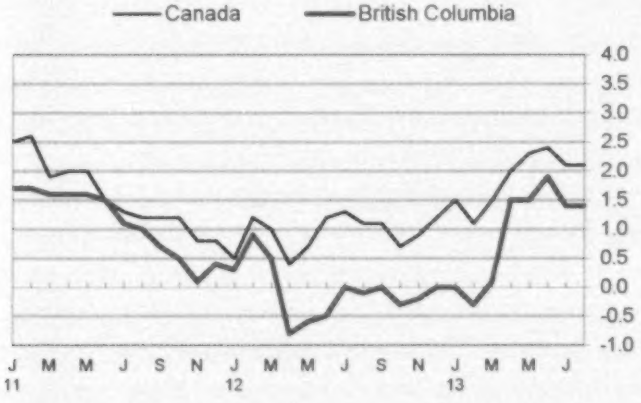
The Canadian inflation rate reached 2.1% in August (unadjusted), as prices continued to rise in every province and territory. Provincial inflation rates ranged from a high of 2.7% in Saskatchewan to a low of 1.2% in Prince Edward Island. *Note: Statistics Canada will release the September Consumer Price Index on October 17, 2014.*

2002=100	All-Items Index	% Change from	
	August 2014	July 2014	August 2013
Canada	125.7	0.0	2.1
BC	119.6	0.0	1.4
Vancouver	121.2	0.0	1.4
Victoria	118.0	0.0	1.3
Core Canada[1]	123.7	0.5	2.1
BC (excluding energy)	116.3	0.1	1.2

[1] The Core CPI for Canada: Defined by the Bank of Canada as the All-items index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

BC AND CANADA INFLATION TREND

(% change, same month of previous year)



2002=100	Latest 12-month Average Index (ending in August 2014)	Latest 12-month Average % Change	2013 Annual Average % Change
Canada	124.4	1.6	0.9
BC	118.5	0.6	-0.1
Vancouver	120.1	0.8	0.2
Victoria	116.9	0.4	-0.3

TERMS AND DEFINITIONS

BASE EFFECT

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

TWELVE-MONTH PERCENT CHANGES

Also referred to as "year-over-year", twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

ANNUAL AVERAGE INDEX

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

LATEST TWELVE-MONTH AVERAGE INDEX

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

HARMONIZED SALES TAX

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.

On April 1, 2013, the Harmonized Sales Tax came into effect in Prince Edward Island, while British Columbia returned to the Provincial Sales Tax and the Goods and Services Tax.
